Participants**

Program overview:

Construction management is a professional discipline applied to construction planning, design, and process. Professional construction managers (CMs) address the needs of owners by providing management services and expertise tailored to the project, independent of the chosen contract format or project delivery method. CMs apply comprehensive project controls to help manage the critical issues of time, cost, scope, quality, and safety. They can help improve worker safety by integrating safety and health into all aspects of the construction process, from the design phase to jobsite management.

For the successful delivery of projects, Professional construction managers (CMs) have to understand the managerial skills, in addition to their technical knowledge, that they need to have. Job sites safety have to be managed with the same degree of expertise and to the same standards as other core business activities because of the high cost of failure.

This course will feature the importance and relevance of efficient and practical strategies necessary to achieve competency for professionals involved in construction management.

Learning objectives

At the end of the program, participants will be able to;

- assess and control work methods, resources and systems to meet works requirements;
- contribute to controlling work quality, progress and cost;
- evaluate Jobsite conditions and Job Hazards Analysis meet recommended safety standards;
- develop productive working relationships, manage changes, and resolve disputes;
- learn Cost control and progress payment administration; and
- lead project meetings and manage the performance of teams and individuals.
