Online course fee: N300, 000 per Participant

Available for In-plant Training

**700 USD for foreign
Participants**

Program Overview:

Production is a scientific process which involves transformation of raw material (input) into desired product or service (output) by adding economic value. Production is defined as “the step-by-step “conversion of one form of material into another form through chemical or mechanical process to create or enhance the utility of the product to the user.

Thus production is a value addition process. At each stage of processing, there will be value addition. Operation is, about the day-to-day creation and delivery of products and services. *Operation* refers to those parts of the business which are concerned with producing products and rendering services.

Operations are repetitive, permanent or semi-permanent functional work to produce products or services. Operations Management is the management of the direct resources required to produce the goods and services provided by an organization.

The very essence of any business is to cater needs of customer by providing services and goods, and in process create value for customers and solve their problems. Production and operations management talks about applying business organization and management concepts in creation of goods and services.

For whom:

This program is designed for Operators, Team Leaders, Coordinators, Operatives, Technicians, procurement and store operators. Engineers and other employees who are involved in operations and production processes as well as quality control personnel, inspectors, testing personnel, or those interested in cost or profit center or quality improvement functions can also benefit from this program.

Learning Objectives

At the end of the workshop, participant will be able to:

- acquire skills in production and operations management;
- discuss capacity planning and facility alignment to enhance effective operations;
- evaluate the process of project planning and control;
- apply quality processes to produce quality products; and
- acquire production management skills that will contribute greatly to quality and cost-effective products to enhance profitability.
